

Pacific Firestorm V1 - Finished Game Agent Loop

Purpose

This document upgrades the earlier Codex/Godot kit from prototype planning to a finished playable Version 1 target. The agent must build, test, fix, and iterate until the V1 Definition of Done passes.

Core Rule

No toy. No placeholder release. Build a playable full V1 from title screen to campaign completion.

V1 Content Floor

- 5 playable missions with mission-complete flow.
- Six uploaded aircraft assets imported as final V1 aircraft sprites.
- Player movement, shooting, damage, lives, bomb/special, power-ups, weapon upgrades.
- Enemy waves, enemy bullets, bosses, score, persistent high score.
- Title, options, controls, pause, game over, mission complete, campaign complete screens.
- Ocean, islands, clouds, ships/carrier, aircraft shadows, effects, and audio.
- Export preset, release notes, test results, final audit, known limitations.

Agent Loop

1. Inspect repo.
2. Compare against V1 gates.
3. Implement highest-priority missing gate.
4. Run checks.
5. Fix errors.
6. Repeat until all gates pass or blocker is documented.

No-Placeholder Gate

Temporary placeholders are allowed during intermediate coding only. The shipped V1 playable route must not show grey cubes, missing textures, dummy menus, TODO screens, silent audio hooks, or unimplemented UI. Uploaded aircraft and original procedural assets count as valid V1 content if coherent and polished.

Start Prompt

You are the coding agent responsible for delivering Pacific Firestorm V1 as a finished playable Godot 4 game.

This is no longer a toy prototype task. The user wants a complete playable Version 1 from start to finish.

Read and obey:

- START_HERE_V1_AGENT_CODING.md
- docs/V1_FINISHED_GAME_SPEC.md
- docs/V1_DEFINITION_OF_DONE.md
- docs/V1_AGENT_LOOP.md
- docs/V1_NO_PLACEHOLDER_POLICY.md
- docs/V1_AUTOMATED_TEST_PLAN.md
- docs/V1_RELEASE_BUILD_PLAN.md
- templates/AGENTS.md

Hard goal:

Deliver a complete playable V1 campaign.

V1 must include:

- title screen
- options/controls screen
- pause menu

- 5 playable missions
- mission complete screens
- campaign complete screen
- game over and restart
- score and persistent high score
- player movement/shooting/special attack
- power-ups and weapon upgrades
- enemy waves from data files
- multiple enemy types using uploaded plane assets
- bosses/set-pieces
- final V1 aircraft sprites from the included plane assets
- ocean/islands/clouds/ships/effects/UI/audio with no player-facing placeholders
- exportable desktop build
- release notes, test results, final audit

No-placeholder rule:

Temporary placeholders are allowed only during intermediate coding. The final V1 playable route must not show placeholders

Operate in loops:

1. Inspect repo.
2. Compare against V1 gates.
3. Implement missing features.
4. Run checks.
5. Fix errors.
6. Repeat until all V1 gates pass.

Do not stop after a single prototype stage. Do not stop after placeholder scenes. Do not say "done" until docs/V1_DEFINI

First action:

Create or update the project so it moves toward a real V1 release. If the project is empty, create the Godot project, im

Definition of Done Summary

- Project integrity
- No-placeholder gate
- Campaign completeness
- Core gameplay
- Aircraft asset gate
- Visual/readability gate
- Audio gate
- Performance gate
- Export gate
- Final audit
